

How an event is added

Every screen, field, image and date rule an organizer meets from "Add Event" to tickets on sale.
Taken from the BookTKIT web code as it is today (October 2026), not from older documents.

One form for create, edit and duplicate. Organizers and admins use the same 6-step event form. The admin version adds one field: which organizer owns the event. On a new event, a draft autosaves in the browser and is offered back when you return to the page.

Three event types compared	2	The 6-step event form	3
Step 2 · Details	4	Step 3 · Schedule, calendar & times	5
Step 4 · Location (3 versions)	6	Step 5 · Images & media	7
Step 6 · Publish, then what happens	8	Ticket design & ticket types	9
Ticket fields & entry rules	10	Seat map & multi-day passes	11
Edit, duplicate, delete & known issues	12		

Three kinds of event

The organizer picks a type on **Choose Event Type** (Event Management → Add Event). Inside the form you can still switch type until the event has tickets or bookings (see page 12).

Online event

A webinar, stream or virtual class. Attendees join through a link.

- **Meeting URL** instead of an address
- Has **one ticket**, set up inside the event form (price, stock, limit per customer)
- You cannot add more ticket types
- No map, counters or re-entry

Venue event

A concert, show or workshop at a physical place. Tickets are sold online.

- **Address, city and map pin**
- **Any number of ticket types**, added after the event is saved
- Optional seat map per ticket
- Entry with a QR code or a physical pass

Box Office event

A venue event that also sells at counters at the gate, such as a fair, festival or park.

- Everything a venue event has, plus:
- **Box office counters** (name and address of each)
- An **event-level re-entry policy**
- Walk-up sales through the POS, with cash shifts

What changes by type

FIELD OR FEATURE	ONLINE	VENUE	BOX OFFICE
Address, country, state, city, ZIP	—	Address and city required	Address and city required
Map pin (latitude/longitude)	— (cleared)	Optional, if Google Maps is on	Optional
Meeting URL	Required	—	—
Ticket price and stock inside the event form	Yes, single ticket	— (Tickets page)	— (Tickets page)
Several ticket types / variations	No	Yes	Yes
Box office counters	—	—	Required (at least 1)
Event re-entry policy	— (forced to none)	— (set per ticket)	None / Limited / Unlimited
Seat map	—	Per ticket	Per ticket
Day passes (multi-date)	—	Yes	Yes
POS / counter sales by staff	—	Yes, if box office is on	Yes

Wizard step count. Coming from the type chooser, the form opens on step 2 (Details) with the type already set, so the organizer sees 5 steps. When editing an existing event the form shows all 6 steps, including Type.

Six steps, one Save

This is a single form split into steps. **Continue** checks the required fields on the current step. **Back** keeps everything entered. Nothing is saved to the server until **Save** on the last step.

STEP	WHAT THE ORGANIZER FILLS IN	CHECKED BEFORE CONTINUE
1 Type	Online · Venue · Box Office	One must be selected
2 Details	Title, category, description, refund policy, meta keywords and description, for every language. "Clone for <language>" copies one language's fields to another.	Required fields not empty
3 Schedule	Single or multiple dates, start/end date and time	End is after start
4 Location	Address and map (Venue/Box Office), counters and re-entry (Box Office), or meeting link and ticket (Online)	Required fields not empty
5 Media	Gallery images (drag & drop or AI), thumbnail (upload, crop or AI)	Checked by the server on Save
6 Publish	Status (Active/Deactive), Featured (Yes/No) → Save	Full server check of every step

Helpers on every step

- **AI** **Generate All Content** fills title, description and meta fields. Each field also has its own AI button. Only shown when AI is turned on for the platform.
- **Draft autosave** keeps your entries in this browser, per event type. Files are not kept. On return: "Restore your saved event draft?"
- **Error box** at the top lists every server error after Save.

Where to find it

Choose type	/organizer/choose-event-type
Add event	/organizer/add-event?type=venue
Save	POST /organizer/event-store
Edit	/organizer/edit-event/{id}
Admin	same form, plus Organizer select

☐ Clone for Hindi language

Hindi ▶

same fields

Where each field appears

FIELD	SHOWN ON
Title	Event card, event page, tickets, invoice, apps
Category	Category filters, home page sections
Description	Event page body
Refund policy	Event page and checkout
Meta fields	Search engines only

Language is a form section, not a separate step. The language a visitor chooses on the website decides which block they see. Address fields for Venue and Box Office events are also per language, on step 4.

Tip. The description limit (1,200) is short for long line-ups. Put details such as the artist list or schedule in the gallery images or the ticket instructions.

Schedule — calendar & times

Choose **Single** for one date range, or **Multiple** for separate dates such as a 3-day festival or a weekly show. All times are **India time (IST)**.

Schedule Type

Schedule Type Required

Single

Multiple

Countdown Status

Active

Deactive

This choice is not saved from the web form. Countdown always stays on (page 12).

Start Date Req

17

12-12-2026

Start Time Req

18:00

End Date Req

17

12-12-2026

End Time Req

23:00

End date must be on or after the start date. End date and time must be after the start, or Continue is blocked.

Multiple dates + Add date

#	START DATE	START	END DATE	END
1	11-12-2026	16:00	11-12-2026	23:30
2	12-12-2026	16:00	12-12-2026	23:30
3	13-12-2026	14:00	13-12-2026	22:00

Each row must have all four values, and its end must be after its start.

December 2026

example: 3-day festival

Mo	Tu	We	Th	Fr	Sa	Su
30	1	2	3	4	5	6
7	8	9	10	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30	31	1	2	3

Event dates (rows 1-3)

Early-bird end, set per ticket

One day, how the times are used

The diagram illustrates the timeline of an event on a single day. It starts with 'Online sales open' at 'Start date + time'. This is followed by the 'Event 18:00 → 23:00'. After the event ends, there is a '+6 h grace' period. The timeline ends at 'Scans stop'. Key markers include 'Start date + time', 'Sales stop', and 'Scans stop'.

- **Duration** is calculated automatically from the start and end.
- For multiple dates, the **event end** is the latest end time among the rows.
- Ticket sales stop once the event has ended.
- Entry scans work only on the event's dates, until 6 h after the end. The 6 h is a server setting.
- Each booking for a multi-date event belongs to **one chosen date**. Day passes can cover several (page 11).
- A date that already has bookings or pass sales **cannot be removed** when editing.

STEP 4

Location — three versions of one step

Step 4 shows different fields for each event type. Venue and Box Office need a physical address. Online needs a meeting link and its single ticket.

Venue & Box Office
Venue
Box

Address Req

Per language. Max 500. The  opens a Google map to drop a pin, if Maps is enabled.

Country If enabled

State If enabled

City Req

The list depends on the state or country chosen.

ZIP code Opt

Latitude / Longitude

Box Office extras
Box Office

Re-entry Policy Req

None
Limited
Unlimited

Maximum Re-entries If Limited

Whole number, 1 or more.

Box Office Locations ≥ 1

COUNTER NAME	ADDRESS	ON
Gate A	North entrance	✓
Gate B	Parking side	✓

+ Add counter. A counter that has already made sales is switched off instead of deleted.

Online
Online

Meeting URL Req

Must be a valid link. Shown to buyers after they book.

Total tickets Req

Limited
Unlimited

Max per customer Req

Unlimited

Hidden when guest checkout is on. Then it is always Unlimited.

Price (₹)

☐ Tickets are Free
Early Bird Discount

Disable
Enable

This choice is not saved, so early bird stays off (page 12).

Admin settings that change this step: Country and State only appear if the admin has turned them on. The map pin only appears if Google Maps is on. If both Country and State are off, City lists every city.

Images & media

Two images are needed for a new event. Both open a **position-your-image** editor: drag the photo and zoom up to 3× so the right part fits the exact frame. The saved file is compressed to under 1 MB automatically.

IMAGE	SIZE	COUNT	FILES	HOW TO ADD	RULE
Gallery images	1170 × 570	1 or more Req	jpg, jpeg, png · ≤ 1 MB	Drag & drop, or AI "Generate Gallery Images" (3 by default)	Upload starts at once. Use Remove before saving to drop one. Images uploaded by someone else can't be attached.
Thumbnail	exactly 320 × 230	1 Req	jpg, jpeg, png · ≤ 1 MB	Choose Image → crop, or AI Generate Image	A different size is rejected. Use the crop editor. When editing, it can be left as is.
Ticket image	best 255 × 390	0–1	image	Ticket settings (after Save)	Printed on the PDF ticket. Can be removed.
Ticket logo	best 200 × 50	0–1	image	Ticket settings	Printed on the PDF ticket.
Seat map background	your venue plan	0–1 per ticket	image	Ticket → Seat Mapping	Seats are drawn on top of it (page 11).

The crop editor

- Drag to move the photo
- Zoom slider 100–300%
- Reset fits it again
- "Use this position" saves the exact size

AI images

Only shown when the admin has turned on AI. Each image uses the organizer's **AI credits**. Generated images go through the same size and 1 MB rules, then show up like uploads.

Duplicating an event copies the thumbnail, gallery, ticket image, logo and seat-map image as new files.

STEP 6

Publish — and what happens on Save

The last step sets visibility. Saving creates the event and sends the organizer straight to **ticket design**, then **tickets**. An event with no tickets cannot be booked.

Publish settings

Status Required

Active

Deactive

Active = visible on the website and apps and on sale.

Is Feature Required

Yes

No

Yes = shown in the featured sections of the home page.

Save

Save checks everything again on the server

- Every required field on every step and in every language
- Date and time order, image size and type
- Type rules: meeting link for online, address and city for physical events, counters for Box Office
- If anything fails, the error box lists it and nothing is saved

After Save — the full path to "on sale"

Event life cycle

No real "Draft" or "Archived" status yet. Today an event is only Active or Deactive, and "ended" is worked out from the dates. A proper Draft → Published → Live → Ended → Archived cycle is in the architecture plan, but not built yet.

From the event list (per event)

Ticket design, then ticket types

Ticket design controls how the **PDF ticket** looks. Then the organizer adds one or more ticket types. Online events skip adding tickets, because their single ticket was set in the event form.

Ticket Settings

Choose · Remove

Instructions
Opt

"Carry a photo ID. Gates open at 4 PM..."

Rich text, printed on each ticket. Unsafe HTML is stripped.

Only these three fields are saved here. Status, owner and type cannot be changed from this screen.

What the buyer receives

- A PDF invoice with one QR code for each ticket
- The QR is a signed code that can't be forged. A copy is refused once used.
- Emailed on payment. Also in "My bookings" and the app.

Add Ticket — pick a pricing model

Free

Price 0. A booking is confirmed straight away and the ticket is emailed. No payment and no KYC needed.

Fields: name, stock, max per customer, entry settings.

Normal

One price for everyone, for example "General ₹999".

Fields: name, **price** ≥ 0, stock, max per customer, early bird, entry settings.

Variation

One ticket with several options, each with its own price and stock, for example Silver ₹999, Gold ₹1,999, VIP ₹4,999.

Each row: name (per language), **price** ≥ 1, stock, max per customer.

Variation table				+ add row
VARIATION NAME *	PRICE *	AVAILABLE TICKETS *	MAX PER CUSTOMER *	
Silver	999	Limited · 300	Limited · 6	
Gold	1,999	Limited · 120	Limited · 4	
VIP	4,999	Unlimited	Unlimited	

Ticket fields & entry rules

Each ticket also sets its stock, a limit per customer, an optional early-bird offer, and how the holder gets in at the gate.

Admission & Pass Type

Pass / Credential Type Req

QR Ticket on Phone (default)

QR Wristband

RFID Wristband

RFID Card

NFC Wristband

QR Badge / Physical Pass

Physical ID Card

Physical pass types only:

- ☒ Pass must be collected and assigned at the venue
- ☒ Phone QR works until the physical pass is assigned
- ☐ Allow replacing a lost or damaged pass → **Max replacements** (1–100) and **Replacement fee** (₹)

☐ Require an exit scan for re-entry tracking

Re-entry

None Limited Unl.

Max re-entries If Limited

What happens at the gate

Refusals tell the staff why: wrong event, wrong date, event ended, already used, pass revoked or lost. Wristband stock, gates, zones and live scanning are managed under **Access Operations**.

Seat map & multi-day passes

Both are added after the tickets exist. A seat map lets a buyer pick an exact seat. A pass sells entry to several dates of a multi-date event in one purchase.

Seat map (per ticket)

1. Open the ticket's **Edit** page and switch on **Seat Mapping** (for a variation ticket, per row).
2. Click **Seat Mapping**, then upload a **background image** of the venue plan.
3. Draw **slots** (blocks or rows) and their seats. Set a price and switch seats on or off.
4. Buyers choose seats on the event page. A seat that is sold or held can't be chosen again.

Note. The note on the ticket edit page says "Ticket slots are available only when the seat map is activated." Seat mapping is not on the **Add** Ticket form, only on **Edit**.

Passes (multi-date events)

The pass can enter **once per eligible date**. A pass that has been sold can't be deleted. The form is disabled until the event has dates and at least one ticket.

Edit, duplicate, delete

The rules below protect anything that has already been sold. These rules are enforced by the server, not just hidden in the screen.

ACTION	ALLOWED	BLOCKED WHEN...
Edit details, media, publish settings	Any time	—
Change event type	Before tickets or bookings exist	Bookings exist (any type change). Tickets exist and the change is to or from Online .
Remove a date (multiple)	Dates with nothing sold	The date has bookings or pass sales
Remove a box office counter	Unused counters are deleted	A counter that was used is switched off, not deleted
Duplicate	Always. The copy opens in Edit as Deactive and not featured.	Copies content, dates, images, tickets and variations, counters, access rules, zones, gates and passes. Sold counts start at 0. No bookings are copied.
Delete a ticket	No sales yet	The ticket has sales. It has to stay.
Delete the event	No bookings or payments	"Events with bookings or payments are kept; set them to inactive instead."
Set Active (paid event)	Payout KYC is activated	KYC is not complete (free events are not affected)

Known issues found while making this guide

#	WHERE	WHAT HAPPENS	EFFECT
1	Step 3 · Countdown Status	The choice isn't in the server's allowed field list, so it is dropped on Save	Countdown is always on. The "Deactive" choice does nothing.
2	Online · Early Bird in event form	The early-bird type, discount, amount, date and time are dropped on Save	Online events can't have an early-bird offer from the web form
3	Step 2 · Refund Policy	Marked * on screen, but the server allows it empty	Small label mismatch
4	Add Ticket · online block	Old online-ticket section with a misspelled field (<code>discont_type</code>). It can't be reached, because online events can't add tickets.	Dead code to clean up
5	Life cycle	Only Active/Deactive. No Draft, Archived or "sales paused" state.	Can't tell a finished event from one still being set up

Fixes 1 and 2 are small server changes: add the missing fields to the event form's validation rules. Fix 3 is a label change. They are not done yet. Ask, and they can be added to the web branch.

Quick image cheat-sheet

- Thumbnail 320×230 · required · ≤1 MB
- Gallery 1170×570 · ≥1 required · ≤1 MB each
- Ticket image 255×390
- Ticket logo 200×50
- Seat-map background · any
- JPG / PNG
